

**Press Release-5/31/06-Cincinnati, OH-** Convergent Media Services hires Central Satellite Services for additional Federal Express teleconferencing.

For the second time in less than a year Convergent Media Services has tapped CentralSat to provide video support and uplink services for Federal Express. The multi-camera event was held at the FedEx Ground Facility in Coreopolis PA. The crew, video equipment, lighting package, power and uplink facilities were under the supervision of Morgan Billingsley of FedEx. The cafeteria was turned into a studio for the shoot that featured a host interviewing guests with an audience. Festive balloons and large back lit plexi-glass image panels featuring FedEx workers created just the right kind of background.

Signals that originated from several locations across the country were fed via satellite to the Memphis FedEx facility where they were combined then fed back to all FedEx facilities across the country. The hour long presentation included interviews and packages about the new FedEx Customer Service Division.

In September of 2005, Alnisa Faiz, Transmission Services Manager of CMS, secured Central Satellite Services for a similar uplink project. That single camera shoot originated from the corporate auditorium of the same facility.

“They keep hiring us because they know the kind of work we do and they trust us with their most important projects.” Jim Timmerman, CentralSat Operations Manager said. He went on to say “Corporations, networks and production companies all rely on Central Satellite Services. We do good work.”
